Clear Anodized

Arm-A-Dor Features and Benefits

- **Enhanced security.** Four-point thru-bolt mounting offers greater security and protection against forced entry. An integrated, audible alarm ensures that the door will only be used in an emergency.
- **Superior safety.** Large print, simple emergency exit instructions in English and Spanish and a wide pushbar surface make operation easy, even in the event of an emergency.
- **Rugged design.** Two-point solid steel deadbolt latching provides a locking bar that extends onto the door frame rather than a traditional latch and strike, offering greater protection against intrusion and withstanding greater use and abuse.
- **Environmental durability.** Constructed for weather and water resistance, Arm-A-Dor performs even in extreme conditions.
- **Easy installation.** Pre-assembled for 3'-4' doors, designed non-handed, and mounted to the door via four thru-bolts, Arm-A-Dor is simple to install and retrofit.

Maximize safety and security on exit doors with PRECISION Arm-A-Dor.
